

## **CX2 Technologies, Inc. Installs a 220 MHz Wireless Data System in New York City**

BOCA RATON, FL – (MARKET WIRE) – December 09, 2008 – CX2 Technologies, Inc. (OTC BB: [CXTO.OB](#) - [News](#)) completed the successful installation and testing of a 220 MHz data communications system for Kennedy Wireless Partners, LLP in Brooklyn, New York.

While the Federal Communications Commission (FCC) has distributed many 220 MHz licenses, the CX2 installation for Kennedy Wireless Partners is the **first fully functional 220 MHz data communications system**.

“Based on our initial field testing,” stated Michael Rand, president of CX2, “the system will provide communications within the entire five-borough area from a single base station, outperforming comparable higher frequency data systems -- at a fraction of the cost of competitors’ offerings. The 220 MHz bandwidth, using CX2’s proprietary 5 MHz channel technology, offers a significant cost/benefit advantage for such applications as vehicle dispatch, vehicle/equipment tracking, credit card processing, remote sensor monitoring, and meter reading.”

Dr. Jim McCain, managing partner of Kennedy Wireless Partners and president of Business Works ([www.bizdrsolution.com](http://www.bizdrsolution.com)), indicated that the company “partnered with CX2 Technologies and Digital Dial to implement a turnkey solution so we could deploy our FCC license in the five boroughs from a single base station. We are now ready to market these capabilities throughout New York.”

Kennedy Wireless chose Digital Dial LLC to implement a turnkey digital data solution for the 220 MHz narrowband spectrum. The turnkey solution comprises customer management, billing, credit card processing, vehicle location/tracking, and remote data collection. To implement the turnkey solution, Digital Dial used a unique combination of CX2 Base Station hardware, CX2 Local Site Server software (running on Microsoft servers integrated with LINUX-MySQL, open source), and Amazon's Elastic Cloud computing technologies.

### **About CX2 Technologies, Inc.**

CX2 Technologies, Inc. is the only company in the world to have developed a technology that enables a wireless data solution at 220 MHz using super-efficient 5 KHz narrowband channels. CX2 constructs the infrastructure that makes possible the efficient transmission of data from/to fixed/mobile meters, sensors, and global positioning devices for commercial applications such as vehicle/equipment tracking for public safety applications such as fire-rescue and law enforcement, and for emergency management systems.

**About Kennedy Wireless Partners, LLP**

Kennedy Wireless Partners, LLP owns and operates a 220 MHz wireless data communications system in Brooklyn, New York. Several managing partners are also managing systems in other parts of the country.

**About Digital Dial LLC**

Digital Dial LLC is a privately held systems integration company located in Delray Beach, FL. The company bundles complex systems.

**Safe Harbor Statement**

Statements in this news release about CX2's future expectations, including the advantages of CX2 products and services, whether CX2 will be successful in implementing its business plan, and all other statements in this release, other than historical facts, are forward-looking statements. It is important to note that actual results and ultimate corporate actions could differ materially from those in such forward-looking statements based on such factors as CX2's ability to raise funds to continue its operations, uncertain market demand for CX2's products and services, CX2's ability to attract and retain qualified employees, new products and services developed by other companies, market share garnered by competitors, ability to develop and maintain supplier and customer relationships, CX2's ability to maintain sufficient inventory to meet customer demand, whether results of testing and development activities are favorable or unfavorable, changes in government regulations and recommendations, and other risks detailed from time to time in CX2's reports filed with the SEC.
